Descriptors- *ENGINEERING EDUCATION, *ENGINEERING TECHNICIANS, *ENGINEERS, ENROLLMENT TRENDS, FEMALES, FOREIGN STUDENTS, GRADUATE STUDENTS, *STUDENT ENROLLMENT, *TECHNICAL EDUCATION, TRANSFER STUDENTS, UNDERGRADUATE STUDY

A questionnaire survey of approximately 870 schools provided enrollment data on technology students. Data are presented in tabular form for curriculum, type of school, and four categories of students--(1) engineering, all degree levels, (2) technology, terminal associate degree level, (3) technology, bachelor's degree level, and (4) pre-engineering, transfer programs. Enrollment data from 180 schools having curriculums approved by the Engineers Council for Professional Development showed these trends since 1965--(1) freshmen enrollments down 4 percent from 67,376 to 64,583, (2) second-year enrollments up 5 percent from 46,325 to 48,640, (3) third-through fifth-year enrollments up 15 percent from 76,823 to 88,371, (4) master's level enrollments up 84 percent, and (5) doctoral level enrollments up 59 percent. Technician enrollment data from 512 schools showed there were 102,000 full time students in associate degree and certificate programs, and 59 schools reported 104,000 students in bachelor of technology programs. The enrollment data are presented in 382 tables, and schools are listed by state with the kinds of curriculums for each school indicated. (EM)

Acknowledgments

The principal contributors to this report were, of course, the deans, registrars, and other officials of approximately 870 schools who provided enrollment data on their engineering and technology students. Thanks are hereby extended to all of them for their cooperation in this survey.

Thanks are also due to the American Society for Engineering Education for encouraging and assisting the Engineering Manpower Commission to undertake this survey. Dr. W. Leighton Collins, Executive Secretary, and Dr. George D. Lobingier, Past President and member of the Board of Directors of ASEE, personally contributed invaluable help and advice in making the survey a success.

Donald E. Irwin and Theodore J. Carron, as 1967 and 1968 Chairmen of the EMC Surveys Committee, had an important part in the planning and policy making that went into this project. Richard C. Fremon contributed technical advice in setting up a computer program for handling the data. Thanks are also due to Dr. Donald C. Metz for his pioneering work and advice in connection with the technician portion of the survey.

The survey was conducted under the general direction of John D. Alden, Executive Secretary of the Engineering Manpower Commission, with the assistance of Miss Carol Iceland of the EMC staff in a multitude of essential functions.

Programming and data processing were done by Computer House, Inc. of New York City.

J. D. A.

The Engineering Manpower Commission of Engineers Joint Council is charged with the following responsibility:

"To engage in studies and analyses of the supply, demand, and utilization of engineering and technical manpower; to make recommendations, conduct programs, and develop reports concerning these aspects of engineering and technical manpower; and to carry on such other programs in the field of manpower as may be authorized by the Board of Directors of EJC."

The Commission is made up of men and women from industry, education, government, and the professional societies whose work involves a close association with technical manpower problems.

INTRODUCTION

This report contains the complete results of the enrollment survey conducted by the Engineering Manpower Commission of Engineers Joint Council in the fall of 1967. It includes the eight data tables published in the Summary Report on Engineering and Technician Enrollments dated January 1968.

Background

The Engineering Manpower Commission of Engineers Joint Council undertook to survey enrollments at all levels in engineering schools and technical institutes, with the objective of providing key statistics in a timely manner. This action was triggered by the decision of the U.S. Office of Education to drop the annual engineering enrollment and degree reports which had formerly been compiled by the Higher Education Studies Branch. Instead, starting in 1967 USOE changed its program to issue annually a report covering degrees in all fields, but only a biennial report on undergraduate enrollments. A special report on 1965-66 engineering degrees was published in the Journal of Engineering Education for September 1967, but no report on 1966 enrollments had been released as of January 1968.

In view of its belief in the importance of accurate and timely educational statistics in engineering manpower planning, EMC checked with its contacts in industry and ascertained that there was indeed a strong demand for annual enrollment and degree figures, preferably within three to four months of the beginning of the normal academic year. The American Society for Engineering Education, which had previously assisted the U.S. Office of Education in its annual surveys, concurred that EMC should undertake the survey in 1967.

Two years previously EMC, at the request of the Technical Institute Administrative Council of ASEE, made its first survey of technician enrollments and degrees (reported in the February 1967 issue of the Journal of Engineering Education). This technician survey was repeated in 1966-67 and published by Engineers Joint Council in its report "Trends in Engineering Technician Enrollments and Graduates." Further, EMC has made surveys of the engineering graduating class for a number of years. EMC was thus in a good position to expand its effort to include both engineering and technician enrollments. It was decided to complete the spectrum by surveying students in bachelor of technology programs and in non-terminal pre-engineering programs given by the technical institutes and other schools having such curricula. Because of the desire to publish enrollment statistics as soon as possible after the start of the school year, it was decided to separate the enrollment

Although enrollment figures are given to the unit digit, it is not intended that they be considered this accurate. As has already been noted, estimates were used for a handful of schools. However, a greater potential source of error is inherent in the individual reports themselves. In a number of cases two reports were received from the same institution, and in practically every instance there were variations in the numbers reported. It is assumed that this problem has existed in previous surveys and that the comparability of figures from year to year is not excessively degraded because of it.

For the technician survey, questionnaires were sent to all known technical institutes, junior colleges, and other institutions offering programs in engineering technology or industrial technology. Since there is no comprehensive list of all such schools, and new ones are constantly being established, the enrollment figures reported here are only an approximation of the total technician enrollments for the entire U.S. Our figures represent, however, the largest known group of technician schools ever surveyed. In the case of schools having curricula accredited by Engineers' Council for Professional Development, at the time the survey was conducted, which constitute the solid core of engineering technology education, 100% returns were received. No attempt was made to estimate enrollment for non-responding schools not on the ECPD list.

To save clerical and data processing costs, no tabulation of enrollments by individual schools was made, nor is one contemplated. However, the names of all responding institutions are listed in this report.

Highlights of the Survey for All Engineering Schools

Results of the survey show a mixture of trends, some hopeful, some less so, all of definite interest to manpower planners on both the industrial and educational sides of the engineering community.

On the pessimistic side, freshman enrollments in the nation's engineering schools are down once more. Approximately 77,500 first-year students enrolled in 274 schools compare with 79,800 students in 1965, when only 258 institutions were surveyed. (Comparison with 1966 is impossible because no enrollment figures for that year have been released by the U.S. Office of Education, which conducted the survey in previous years.)

Questionnaires were sent to all known engineering schools in the United States. By the end of November replies had been received from all but four of the engineering schools on the ECPD list and eight unlisted schools, constituting less than 2% of the total enrollments. To make the data comparable with previous years, estimates were made for these schools. Engineering enrollment data are thus entirely comparable with those reported by the U.S. Office of Education in previous years. In a few cases schools were unable to break down their data exactly as desired for this report, such as being unable to separate master's and doctor's enrollments in the first year, etc. In such instances an arbitrary division was made on the basis of overall ratios prevailing in previous years. The numbers involved were too small to be significant in the totals.

The all-school data were also broken down in terms of control (public: state, municipal, federal; private: religious, non-sectarian) and by state, and Tables showing all these results will be found in this report.

The questionnaire format for the engineering survey was simplified, in comparison with the USOE form, by eliminating part-time enrollments, combining fifth year regular and co-op programs, combining master's and other pre-doctoral degree enrollments into a single total, and requesting information on women students for all curricula combined instead of individually for each curriculum.

On the other hand, it was felt that certain information not previously included in the USOE report was of sufficient interest to justify attempting to gather it. Among the additions were a count of foreign students in all curricula combined, separate identification of enrollment in biomedical, nuclear, and textile engineering curricula, and a breakdown by curriculum of first and second year enrollments, which the USOE surveys have lumped together in an "all engineering" category since 1963. The purpose of breaking down the freshman and sophomore enrollments was to ascertain what percentage were in "common core" or undesignated curricula in comparison with earlier reports.

The curriculum designations were the same as used in the 1965-66 degree report with the exception of the additions mentioned above and the inclusion of the new ocean engineering curricula in the "marine" category along with naval architecture and marine engineering. It is believed that all responding institutions reported their curricula as intended except for the environmental health and sanitary category. Here several schools reported that sanitary engineering enrollments were included with civil engineering. Since the environmental group is a small one, the understatement of 1967 enrollments may be significant, and comparison with previous years should be judged accordingly.

A more optimistic note is evident in the total enrollment figures. These indicate an 8% increase in undergraduate enrollments in the first through fifth years. Graduate enrollments were a whopping 79% higher than two years ago, with 49,600 full-time students in these categories. A comparison of the two sets of statistics indicates that engineering education is moving rapidly in the direction of graduate and upper level undergraduate programs, with more and more of the freshman and sophomore instruction being shifted to the junior colleges, technical institutes, and four-year liberal arts colleges which do not themselves offer engineering degrees. Students from these schools are apparently transferring in increasing numbers to the regular engineering schools in their second, third, or fourth years. The following comparison shows how the number of upper level students has changed in proportion to every hundred freshmen:

	First Year	Second Year	Third Year	Fourth Year	Fifth Year	Master's Programs	Doctor's Programs
1967	100	73	65	61	6	44	20
1965	100	66	51	53	5	23	12

This changing role of the engineering schools leads to a rather baffling problem: where can we find the freshman class in engineering? The answer is that we can't. We can count the ones in the regular engineering schools, but more and more will be found elsewhere. This survey turned up more than 23,000 students enrolled in pre-engineering transfer programs in 285 two-year institutions, in addition to those pursuing two-year associate degree or certificate curricula in these same schools. Beyond these are the uncounted numbers in the nation's liberal arts colleges and other educational institutions not reached by any engineering survey. Indeed, if we could reach these schools they would probably find it impossible to separate the pre-engineering students from the pre-anything else candidates. As a practical matter, then, we are going to have to look more and more to third and fourth-year enrollments to discern trends in the undergraduate engineering student population.

When we look at enrollments in the various specialized curricula, we have to use figures for the third through fifth years combined because so many freshmen and sophomores are now enrolled in "common core" or "undesignated major" programs. The 1967 figures are 45% for first year students and 18% for those in their second year. The most recent comparable figures are 34% and 13% respectively for 1962. (These figures apply only to students in the regular engineering schools. Of those in the two-year schools surveyed this year, 70% are in unspecified curricula.)

As for the traditional fields, electrical, mechanical, and civil engineering still lead all the rest. The following comparison, however, shows that there have been some changes over the last two years in the percentage of total enrollments contributed by each field:

<u>Curriculum</u>	<u>Undergraduates (3rd-5th years)</u>	
	<u>1967</u>	<u>1965</u>
Electrical	27.1%	30.6%
Mechanical	20.6	21.4
Civil	15.0	15.0
Chemical	8.3	8.3
Industrial	5.8	5.6
Aerospace	5.4	4.8
Engineering Sciences	4.0	2.5
General & Unified Engineering	3.7	3.8
Metallurgical & Materials	2.0	2.1
All Other	8.1	5.9

Aerospace, engineering sciences, and industrial engineering are the principal gainers at the expense of the two leaders. A host of new specialized curricula are reflected in the increased size of the "all other" category. Biomedical engineering was listed separately for the first time in this survey, with 409 students reported, mostly in graduate programs. Other specialized curricula had the following total enrollments, graduate and undergraduate:

Agricultural	2,454
Architectural	3,013
Environmental Health	552
Geological	1,035
Marine (including ocean)	2,441
Mining	876
Nuclear	2,221
Petroleum	1,461
Textile	484

When the engineering enrollment data are analyzed by type of school, a number of interesting comparisons are revealed. In terms of accreditation, 85% of the undergraduates and 97% of the graduates are in schools having at least one curriculum accredited by ECPD. Only 79% of the undergraduates, however, are actually enrolled in accredited curricula. (Since ECPD does not normally accredit graduate curricula, no comparable statistic is applicable to graduate students.)

Of the undergraduates, by far the most are in public schools, with only 28% in private institutions. For graduate students, however, the private universities are carrying 40% of the load. The percentages for the various classifications of schools are as follows:

<u>Type of Control</u>	<u>Undergraduates</u>	<u>Graduate Students</u>
	72%	60%
Public		
State	66	55
Municipal	3	3
Federal	3	2
Private		
Non-sectarian	28	40
Religious	22	36
	6	5

As part of this survey, the engineering schools were asked to report the number of women and foreign students enrolled. Although many were unable to give this information, enough reported data to permit an estimate of the totals involved. For women, the results are disappointing, with enrollments constituting less than 1% of the totals. A possibly hopeful sign is that the figures for the freshman and sophomore years are somewhat higher, which may mean that more girls are entering engineering than previously.

In the case of the foreign students, the number of undergraduates appears to be understated, as data from other sources would indicate at least 11,000 such students rather than the 8,300 estimated by EMC. Figures for graduate enrollments are more accurate and are in close agreement with other counts. These indicate that nearly one fifth of our engineering graduate students are non-citizens. If changes in the draft result in the induction of more graduate students, as has been predicted in educational circles, the percentage of foreign students is bound to increase even more dramatically. The implications of these developments on the education and utilization of engineers in the U.S. are certainly deserving of further study.

Trends in Technician Enrollments

Turning to the technician side of the survey, 102,000 full-time students are enrolled in associate degree or certificate programs in 512 schools, but only 88,200 of these are in engineering technology programs. The other 14% are in physical science, mathematics, and industrial technology curricula. Of all these schools offering technician programs, only 49 are on the 1966 ECPD accredited curriculum list. However, these schools account for 23% of the students reported. This percentage is declining rapidly with the proliferation of new non-ECPD accredited schools entering the field each year. Most of these are state or community junior colleges. Publicly controlled institutions make up 85% of the technician enrollments.

The popularity of technician specialties parallels that in engineering with the electrical and mechanical fields accounting for 38% and 19% of the total, respectively. Drafting and design, with 18%, is next, followed by civil with 11% and aerospace with 4%. The remainder are enrolled in a variety of different curricula.

An interesting group not covered by previous surveys is the bachelor of technology programs being offered by 59 schools that responded to the EMC questionnaire. These reported a total of 10,400 students, of whom almost 70% were in engineering technology programs, while the rest were in those identified as industrial technology. Although no curricula in this group were listed by ECPD at the time of the survey, several have since been accredited. As the engineering schools tend to become more and more graduate degree institutions, it is probable that increasing numbers of bachelors of engineering technology will be graduated to meet the needs of industry for such employees.

The final group covered by the survey consisted of pre-engineering transfer students, as already mentioned.

All but 10 of the schools reporting such enrollments are not on the ECPD accreditation list, and most are in the public sector. Only 30% of these students are in specialized engineering programs, of which civil and related curricula are most prominent.

The attrition rate for these pre-engineering students appears to be high, with second year enrollments totaling less than half of those for the first year. Many may be shifting to associate degree programs, but there is insufficient information available to be sure what is happening to them.

The entire question of technician enrollments is clouded by the rapid pace of change in curricula, degree levels, and numbers of institutions offering technological programs. Other than the ECPD accredited curricula, no nation-wide standards exist with which to evaluate these programs. A curriculum by curriculum analysis of all those reported to EMC would be entirely beyond the scope of this survey. Technology enrollments have been tabulated in the categories reported by each institution, except for a few cases where errors were obvious. The curriculum categories used are broad and general at best, but responding schools seemed to have little difficulty in placing their enrollments under the headings provided. In general, however, no comparable statistics exist for previous years, and any comparisons should be made with caution.

Trends in Schools with Engineering Curricula Accredited by ECPD

The 180 institutions having one or more engineering curricula accredited by the Engineers' Council for Professional Development constitute the core of engineering education in the United States. Trends in these schools are therefore of particular significance in any study of enrollments. The 1967 EMC survey revealed the following developments since 1965:

- Freshman enrollments are down 4%, from 67,376 in 1965 to 64,583 in 1967.
- Second year enrollments are up 5%, from 46,325 to 48,640.
- Third through fifth year enrollments are up 15%, from 76,823 to 88,371.
- Master's level enrollments are 84% higher and those in doctorate programs are up by 59%, compared with 1965.

The foregoing figures indicate that the ECPD schools are leading the shift in emphasis toward graduate programs and the upper half of the undergraduate curriculum. Graduate enrollments as a percentage of total enrollments have risen from 12.5% in 1965 to 19.2% in 1967. The shifting undergraduate pattern is indicated by the following comparison of enrollments in each class as a percentage of the freshman enrollments, for 1967 and 1965:

	First Year	Second Year	Third Year	Fourth Year	Fifth Year
1967	100	75	67	64	6
1965	100	69	53	56	5

The increasing proportion of upper classmen could be due in part to reduced attrition among the freshmen and sophomores, which would be expected to result from higher selectivity in the admission of a smaller freshman class. It is also undoubtedly affected by the increased input of students from pre-engineering programs in schools which do not themselves offer engineering degrees.

The ECPD schools are also leading in the use of undesignated or "common core" curricula in the freshman and sophomore years; almost half of their first year students are undesignated as to major, and this does not include those in general engineering or unified curricula.

Foreign students appear to constitute about 3% of the undergraduate enrollment but 20% of the graduates. These findings are practically identical to the figures for all schools combined, because of the dominance of the ECPD schools in graduate programs.

The figures for the various curricula indicate that the field is still dominated by electrical, mechanical, civil, and chemical engineering in that order. On the basis of third through fifth year enrollments, these four curricula constitute 74% of the total. This is down three percentage points from 1965, the difference being made up by increases in a number of the less populous curricula.

Enrollments in biomedical engineering programs, although of much interest qualitatively, total only 202, mostly graduate students. In the "marine" field a substantial increase in undergraduates is evident, but most of this is probably due to counting new programs in ocean engineering rather than to an expansion in the traditional naval architecture and marine engineering curricula. The nuclear engineering curriculum seems to be sufficiently strong to warrant continuing to report it separately from the "other" category in future surveys.

Statistics that have not been collected previously are the enrollments in curricula actually accredited by ECPD. The number of institutions reporting each curriculum are, in all cases but one, equal to or less than the number appearing in the 1966 ECPD list of accredited curricula. This is because several schools having accredited curricula did

not report any enrollments in them. The "other" category consists of one welding engineering curriculum and one school which reported all curricula combines.

In the case of the "undifferentiated" category, it was arbitrarily decided that all undesignated students in a school on the ECPD list would be counted as if they were in an accredited curriculum, as it would be impossible to determine whether they might ultimately go into an accredited or an unaccredited program. Also, if a school had both accredited and non-accredited curricula in a particular field (such as the metallurgical-materials-ceramic group, for instance), all enrollments in the entire field would be treated as accredited. The effect of these minor but necessary approximations is practically negligible. It appears that about 93% of the undergraduate engineering students in the schools listed by ECPD are actually in accredited curricula. The figures for graduate students are, of course, almost meaningless, in that only a handful of such programs are accredited. To simplify computer programming, if an undergraduate curriculum was accredited, graduate students in the same field were also counted as accredited.

Technician Enrollments in ECPD - Accredited Programs

There were 49 institutions on the 1966 ECPD engineering technology list (counting each of the 12 Pennsylvania State University centers separately). Of their total full-time enrollment of 23,106 students, 9% are in non-engineering (Physical science, mathematics, or industrial technology) curricula, and 7% are in unaccredited engineering technology curricula. Within the accredited curricula, electrical and electronic specialties are by far the most popular, followed by mechanical, civil, drafting, and aerospace.

The survey also reported 563 full-time and 147 part-time students enrolled in bachelor of engineering technology programs in 17 of these schools.

Only 10 schools reporting students in non-terminal pre-engineering courses were on the ECPD list. Total enrollments in engineering transfer programs do much to explain the changes in the input to the regular engineering schools discussed earlier in this article. However, several additional observations are in order.

First, this survey covered only schools known or believed to be offering programs in technology, mostly at the two-year level. There are undoubtedly many four-year colleges giving pre-engineering instruction today, but no attempt has ever been made to survey all engineering transfer students in the country. Also, many students in two-year associate degree programs may later enroll in baccalaureate curricula even though their junior college work was designed to be terminal in nature.

Second, many schools offering non-ECPD accredited technology curricula may have been missed by the survey. This group is so fast-growing and so poorly identified that it is impossible to define the universe accurately.

We can, however, look at the ECPD-listed technician schools with some assurance. Only 1,043 pre-engineering students were reported from such schools. Therefore it is reasonable to conclude that the increased input of transfer students is coming mainly from schools which have no engineering faculty and no formal relationship to ECPD. The quality of the pre-engineering education of these students should be a matter of interest, if no concern, to engineering educators who will be seeing more and more of this type of student. It might be noted that 70% of all pre-engineering students were enrolled in general or undesignated engineering curricula.

Another observation is that there is a 53% drop from first to second year enrollments in this group. While this cannot all be considered "attrition," there may well be a great deal of attrition in it. Therefore we cannot equate one of these new pre-engineering students with the familiar engineering freshman of past years.

Enrollment Figures by State

Data for the 50 states, Puerto Rico, and the Canal Zone have been tabulated according to the same basic format used for the total U.S. report. Separate tables have been provided for enrollments in engineering, associate degree in technology, bachelor of technology, and pre-engineering (transfer) programs; except that tables have been omitted for categories in which no students were reported. Within each category there are breakdowns by curriculum and by type of school.

No attempt will be made to analyze or interpret trends on a state by state basis in this report, but those wishing to make such studies will find a wealth of data in the tables.

Names of Participating Schools

The names of all participating institutions are listed by state near the end of this report. In the case of the technology schools, the particular types of programs in which they reported enrollments have also been checked. Some schools appear in both the engineering and technology lists. The individual returns of the responding schools have not been reported and are not available from the Engineering Manpower Commission. Detailed information on enrollments or programs in a particular school must be requested directly from the institution in question.

Conclusion

This survey has, for the first time, attempted to look comprehensively at the entire engineering-technologist-technician enrollment picture. It has also departed from established practice in a number of ways, in order to look at other facets of the question that seemed to be of particular interest to those concerned with the manpower implications of educational statistics.

Comments on the approach taken in this survey and suggestions for improvement will be welcomed. These will be considered for incorporation into future surveys, if these are continued by EMC, or will be recommended to the U.S. Office of Education if that agency decides to resume the special engineering enrollment and degree reports it published for so many years.

EXPLANATION OF DATA TABLES

General Arrangement

All tables present enrollment figures broken down either by curriculum or by type of school. Separate tables are provided for each of four categories of students:

- Engineering, all degree levels
- Technology, associate degree programs (terminal)
- Technology, bachelor's degree programs
- Pre-engineering programs (transfer)

Curriculum Designations

Tables showing data by curriculum for engineering programs follow, in general, the designations and groupings used by Engineers' Council for Professional Development in its 1966 list of Curricula Leading to First Degrees in Engineering, with the following exceptions:

- "Biomedical" is an unofficial category added by EMC. No accredited curricula exist with this title.
- "Marine" as used in this survey includes curricula in ocean engineering, marine engineering, and related titles, in addition to the naval architecture and marine engineering curricula accredited by ECPD.
- "Other" includes the welding engineering curriculum accredited by ECPD, as well as as a variety of unaccredited curricula not classifiable under any other group.
- "Undifferentiated" refers to students who have not designated a major engineering field or who are in "common core" courses at the lower undergraduate levels.

A few schools included Sanitary Engineering enrollments with Civil Engineering instead of reporting them under Environmental and Health. Since the latter group is quite small, the shift of a few enrollments could be significant on a percentage basis, or when making year to year comparisons. This possibility should be kept particularly in mind when considering the statistics for a single state.

Totals for women and foreign student enrollments were estimated by computing the ratio of these students to total enrollments, year by year, for those schools that were able to provide this information. The ratio was then applied to the total enrollment for all schools to arrive at the figures shown. This was done separately for each state and for each category in the total U.S. summaries. Because of this, the individual totals will not add up exactly to the national totals. On the basis of data on foreign students compiled by the Institute for International Education, the EMC figures for graduate students are believed to be quite accurate, but those for undergraduates are probably understated.

For the technology schools, a simplified grouping was used consisting of aerospace, civil, drafting and design, electrical and electronic, mechanical, and all other fields of engineering technology; also physical science and mathematics technology, and industrial technology. There are no exact definitions for any of these fields, and in most cases classification was made by the reporting institution itself.

Breakdown by Type of School

The top line in each of these tables gives the figures for all schools, which are identical with the "total-all curricula" figures in the breakdowns by curriculum.

The next two lines separate schools on the 1966 ECPD lists of accredited curricula from all other schools. These two lines add up to the totals on the first line.

The next two lines distinguish between enrollments in curricula specifically accredited by ECPD, and all other curricula. In a few fields (such as metallurgical and materials, which also includes ceramic engineering) a school may have had both accredited and unaccredited curricula. In such cases all enrollments in the entire field were arbitrarily counted as accredited. In the case of undifferentiated students, all of those in schools with at least one ECPD-accredited curriculum were arbitrarily considered as accredited. The figures for graduate students in these two lines are essentially meaningless, as few graduate curricula are accredited by ECPD. If an undergraduate curriculum was accredited, the computer simply was programmed to print out graduate enrollments on the same basis. Because many schools have both ECPD accredited and unaccredited curricula, the sum of the numbers of institutions reporting (first column of figures) will be greater than the actual number of schools included in the survey.

The remaining lines separate the publicly and privately controlled schools. In the case of engineering enrollments, the public sector is further broken down into state, municipal, and federal subgroups, while the private group is categorized by non-sectarian and religious control. For the technology enrollments, it was found difficult to make a clear-cut distinction between state and local control; therefore the public sector is not further broken down in these tables.

Bachelor of Technology Tables

The 59 schools reporting these programs include some which also offer two-year technology programs, some with regular engineering curricula, some with both, and some with no other technological programs than the bachelor of technology.

Curricula for these programs are grouped in the same categories as the two-year programs.

At the time the survey was taken no bachelor of engineering technology curricula had been accredited by ECPD. When figures appear for accredited and non-accredited curricula in this category, they are based on the accreditation of two-year programs in the same field (e.g. an institution having an ECPD-accredited civil engineering technology curriculum would also be counted as accredited for bachelor's degree programs in this field).

Tables for Pre-Engineering Students

This category consists of enrollments in non-terminal two-year programs in the six fields used for the technology enrollments. Most of these reported in the "other" category are in general or non-specialized curricula. None of these curricula are accredited by ECPD.

Accuracy of Figures

Although figures are given to the unit digit, they should not be considered that precise. Considerable variation will be obtained depending on which college official is asked to provide the figures, and on the time they are reported. In a few cases schools gave lumped figures for certain years, and an arbitrary assignment had to be made based on general distribution patterns.

Such variations have always existed in enrollment statistics, and they are probably insignificant in the summary tables. When only one or two schools are reported in a particular state or category, however, the user should recognize that the figures are approximate only and may not be comparable with similar reports based on a different sample of schools.

NOTES:

- * On 1966 ECPD list of accredited curricula leading to first degrees in Engineering.
- + Enrollments estimated by EMC. Returns from Fairleigh Dickinson University and North Carolina Agricultural and Technical State University were received too late to be tabulated.
- # All enrollments tabulated under Bachelor of Engineering Technology category.

"X" indicates that the school reported enrollments in the category checked.

* On 1966 ECPD List of Accredited Curricula Leading to Degrees in Engineering Technology

ENGINEERING ENROLLMENT SURVEY

(Note 1)

Field of Engineering Curriculum (Note 2)	1 Check If E C P D ACCREDITED (Note 3)	UNDERGRADUATES					Master's or Other Pre-Doctoral Degree (Note 6)		
		2 First Year (Note 4)	3 Second Year (Note 4)	4 Third Year	5 Fourth Year	6 Fifth Year (Note 5)	7 First Year (Note 5)	8 Other Years	9 All Years
A Aerospace (aeronautical, astronautical, etc.)									
B Agricultural									
C Architectural									
D Biomedical									
E Chemical									
F Civil (incl. construction, transportation)									
G Electrical (incl. communications, electronics)									
H Engineering Sciences (incl. engineering mechanics, engineering physics)									
I Environment and Health (incl. sanitary)									
J General Engineering (incl. unified "Engineering" curricula but not undifferentiated students. See Note 4.)									
K Geological (incl. geophysical)									
L Industrial (incl. management)									
M Marine (incl. naval architecture and ocean engineering)									
N Mechanical									
O Metallurgical and Materials (incl. ceramic)									
P Mining (incl. mineral)									
Q Nuclear									
R Petroleum									
S Textile									
T Other specific engineering									
U Undifferentiated (Note 4)									
V Bachelor of Engineering Technology (Note 7)									

The following two categories should also be included in the individual curriculum totals above:

W Women - All Curricula (Note 8)									
X Foreign Students - All Curricula (Note 8)									

Nome of Institution _____

Address _____

Reporting Officer _____

ENGINEERING MANPOWER COMMISSION
345 East 47th Street
New York, New York 10017

Engineering Enrollment Survey - September 1967
INSTRUCTION SHEET

This survey is being made by the Engineering Manpower Commission of Engineers Joint Council with the support of the American Society for Engineering Education. The objective is to publish timely statistics on engineering enrollments for use in manpower planning by employers, educators, and others. This survey does not replace that conducted by the U. S. Office of Education, but is intended to produce key statistics sooner than available from the more detailed survey. A complimentary copy of the report will be sent to the reporting officer of all participating institutions as soon as published.

PLEASE NOTE THE FOLLOWING BEFORE FILLING OUT THE QUESTIONNAIRE:

- Note 1 - Report full time enrollments only, including co-op programs. Include only students enrolled definitely as candidates for an engineering degree.
- Note 2 - Curriculum. The groupings are based on the 1966 ECPD listing. Use "Other Specific Engineering" category (line T) only if curriculum cannot be included in any related major group.
- Note 3 - Accreditation. For each curriculum field reported, check this column if one or more curriculum in the field is accredited by ECPD at your institution.
- Note 4 - Undifferentiated Students. If your institution does not differentiate curricula during the first or second years, report these students only in line U, "Undifferentiated." Do not use this group for students enrolled in "General Engineering" (line J) or "Other Specific Engineering" (line T) curricula.
- Note 5 - Fifth Year Students. Report candidates for five year bachelor's degree in column 6, whether regular or co-op program. If the curriculum is an integrated one leading to a five-year master's degree, report fifth year students under first year of master's degree in column 7.
- Note 6 - Other Pre-Doctoral Degree. Enrollments for professional degrees beyond the bachelor's but pre-doctoral in level are to be included with master's degree enrollments for this report.
- Note 7 - Bachelor's of Engineering Technology. Report only students definitely enrolled in curricula leading to a bachelor's degree or higher. Do not report students in two-year technician curricula.
- Note 8 - Women and Foreign Students. Because of the small numbers involved, totals should be reported for all curricula combined. These should also be included in the individual curriculum totals above.

IMPORTANT: See Notes on Reverse Side Before Filling Out This Form

ENGINEERING TECHNOLOGY ENROLLMENT SURVEY

(Note 1)

Field of Curriculum	1 Check if E C P D Accredited (Note 2)	ASSOCIATE DEGREE OR CERTIFICATE PROGRAMS (Notes 3, 4, 5)					BACHELOR OF TECHNOLOGY PROGRAMS (Note 6)						PRE-ENGINEERING STUDENTS (Note 7)

ENGINEERING MANPOWER COMMISSION
 345 East 47th Street
 New York, New York 10017

Engineering Technology Enrollment Survey - September 1967

INSTRUCTION SHEET

This survey is being made by the Engineering Manpower Commission of Engineers Joint Council with the support of the American Society for Engineering Education. The objective is to publish timely statistics on engineering technology enrollments for use in manpower planning by employers, educators, and others. This survey does not replace that conducted by the U. S. Office of Education, but is intended to produce key statistics sooner than available from the more detailed survey. A complimentary copy of the report will be sent to the reporting officer of all participating institutions as soon as it is published.

PLEASE NOTE THE FOLLOWING BEFORE FILLING OUT THE QUESTIONNAIRE:

- Note 1 - Report students enrolled in technician or technology programs as indicated. Do not report students in curricula leading to an engineering degree at your institution. (A separate questionnaire has been sent to all engineering schools.) See Note 7 for pre-engineering transfer students.
- Note 2 - For each field reported, check this column if one or more curriculum in the field is accredited by ECPD at your institution.
- Note 3 - Engineering Technicians - students in engineering oriented organized occupational curricula of at least two (2) but less than four (4) year, leading to Associate degree or similar designation.
- Note 4 - Physical Science Technicians - students in physical science and mathematics oriented organized occupational curricula of at least two (2) but less than four (4) years, leading to Associate degree or similar designation. (Do not include Medical or Dental Technicians or others not directly related to the physical sciences.)
- Note 5 - Industrial Technicians - students in skill oriented organized occupational curricula of at least two (2) years leading to Associate degree or similar designation.
- Note 6 - Bachelor of Technology - students in engineering or technically oriented curricula leading to a Bachelor's degree in technology but not to a recognized degree in engineering. Separate categories are provided for engineering technology and industrial technology curricula.
- Note 7 - Report only students in non-terminal pre-engineering programs of at least two (2) years duration, leading to transfer to an engineering school for completion of a Bachelor's degree in engineering. To be reported only where the institution itself does not award Bachelor's degree in engineering. Report students in the closest applicable field of engineering technology. If students are not differentiated as to specialized field, report them in line F, "Other."
- Note 8 - This column has been provided to report students in master's degree and other post-baccalaureate programs at a few schools.
- Note 9 - Civil Engineering Technology - include also architectural, building, construction, highway, structural, surveying, and similar engineering technology programs.
- Note 10 - Electrical and Electronics Engineering Technology - include also communications and similar engineering technology programs.
- Note 11 - Mechanical Engineering Technology - include also air conditioning, diesel, machinery, and similar engineering technology programs.
- Note 12 - Other Engineering Technology - include general, industrial, and other engineering technology programs which cannot be reported elsewhere.
